

EZEQUIEL AMADOR RAMÍREZ GARCÍA

Senior Software Engineer · Full Stack · Ruby on Rails & Python
+56 9 4588 9055 · ezeram94@gmail.com · [LinkedIn](#) · Santiago, Chile

PROFILE

Software engineer with 8+ years of experience, primarily focused on backend but comfortable across the full stack. I work mainly with Ruby on Rails and Python, and I have experience with Vue.js on the frontend when the problem calls for it. What drives me most is taking ownership of complex problems and seeing them through to completion — writing clean, maintainable code that scales and holds up over time. I care deeply about continuous learning and have invested a lot in mentoring, workshops, and code reviews, because I believe code quality and team quality go hand in hand. I communicate well with both technical and non-technical audiences, and I thrive in environments where good technical judgment is valued as much as delivery speed.

WORK EXPERIENCE

Buk – HR Software · February 2023 – June 2026 · Santiago, Chile

Staff Engineer

- Built the Outputs module: a system for generating and managing financial files integrated across multiple parts of the Buk ecosystem, designed for reliability and maintainability at scale.
- Managed the Performance Safety Net project to completion: an on-demand tool to identify and isolate performance bottlenecks when degradation signals appear.
- Developed deep expertise in performance, using memory_profiler and stackprof to find and resolve critical bottlenecks in a payroll system processing millions of records.
- Led a large-scale data migration, creating approximately 2.4 million records in a controlled way with no impact on production.
- Architected multiple epics and missions, leading the design from business problem definition through to technical solution, working closely with the Product Manager on each initiative.
- Ran TDD and performance workshops across multiple teams, and was a frequent presenter at Outputs: University, a regular technical knowledge-sharing session for the engineering area.
- Mentored engineers across different teams, including one who went on to found the company's AI Guild and ship their own solution with real business impact.

Buk – HR Software · February 2021 – January 2023 · Santiago, Chile

Engineering Manager / Tech Lead

- Led the Colombia Payroll team as it grew from 4 to 12 engineers, splitting time between people coordination, PR reviews, career development and delivery tracking.
- Worked directly with the Product Manager to align technical vision with product goals, with visibility over business metrics via Jira and Looker Studio.
- Conducted bi-annual performance reviews and regular 1-on-1s with each team member, focused on professional growth and constructive feedback.
- Eliminated critical technical debt by consolidating dispersed business logic into the core product, reducing complexity and improving maintainability.
- Delivered partial and bi-weekly pay slips on time, coordinating the team from design through to deployment.

Buk – HR Software · June 2019 – January 2021 · Santiago, Chile

Software Developer

- Introduced parallel_tests to horizontally scale the CI pipeline, significantly reducing test suite execution times.
- Was the first to introduce custom functions into the system's expression engine, opening a new layer of extensibility without modifying the core.
- Joined as a Ruby on Rails newcomer and contributed to core features of a SaaS product used by thousands of companies across Latin America from my first month.

Tecnosmart SpA · February 2017 – May 2019 · Santiago, Chile

Full Stack Developer

- Lead developer on multiple business management projects for clients like Mallplaza and Lipigas, using Python and Django on the backend, delivering each project end to end: design, development, QA and handoff.

TECHNICAL SKILLS

Languages: Ruby (main), Python, JavaScript

Frameworks: Ruby on Rails, Django, Vue.js

Infrastructure: Kubernetes, AWS, GCP (familiarity in production environments), CI/CD pipelines

Databases: PostgreSQL, MySQL, Redis

Testing: Minitest (main), RSpec, unit and integration tests

Performance: memory_profiler, stackprof, regression detection and resolution

APIs: REST, Webhooks, third-party service integrations

Methodologies: Agile, TDD, Diataxis, DORA metrics, Sprints

Leadership: Mentoring, technical workshops, code reviews, hiring, epics and missions

AI Tools: Advanced use of LLMs in development workflow (Claude Code, Windsurf), structured prompting

EDUCATION

Instituto Universitario Tecnológico Dr. Federico Rivero Palacios

Computer Engineering · 2011 – 2016 · Venezuela

LANGUAGES

Spanish: Native · **English:** Advanced (reading, writing and comprehension)
