

EZEQUIEL AMADOR RAMÍREZ GARCÍA

Tech Lead · Engineering Manager · Ruby on Rails

+56 9 4588 9055 · ezeram94@gmail.com · [LinkedIn](#) · Santiago, Chile

PROFILE

Software engineer with 8+ years of experience, with a career that grew naturally from development into team leadership and management. What motivates me most is seeing the people I work with grow: supporting their development, giving honest feedback, and building teams that understand the why behind what they build. I believe good management means listening before opining, unblocking without imposing, and keeping focus on what truly matters for the business and the people. I have experience running performance reviews, regular 1-on-1s, resource planning and product coordination, always with the goal of helping the team deliver value sustainably. My technical background allows me to understand the real problems the team faces, evaluate estimations with sound judgment, and make better management decisions.

WORK EXPERIENCE

Buk – HR Software · February 2023 – June 2026 · Santiago, Chile

Staff Engineer

- Led the architecture of multiple epics and missions, from business problem definition through to technical solution, working closely with the Product Manager on each initiative.
- Participated in hiring and evaluation processes for engineers, contributing technical judgment to team decisions.
- Conducted code reviews focused on scalability, maintainability and performance, and championed them as a cultural practice within the team.
- Mentored engineers across different teams, including one who went on to found the company's AI Guild and ship their own solution with real business impact.
- Impulsé talleres de TDD y performance para múltiples equipos, y fui presentador frecuente en Outputs: University, un ritual de sesiones técnicas de ingeniería.
- Gestioné el proyecto de la Malla de Seguridad de Performance: una herramienta on-demand para identificar y aislar cuellos de botella cuando aparecen señales de degradación.
- Led a large-scale data migration, creating approximately 2.4 million records in a controlled way with no impact on production.

Buk – HR Software · February 2021 – January 2023 · Santiago, Chile

Engineering Manager / Tech Lead

- Led a team that grew from 4 to 12 engineers, splitting time between people coordination, PR reviews, career development and technical plan tracking.
- Worked directly with the Product Manager to align technical vision with product goals, with visibility over business metrics via Jira and Looker Studio.
- Conducted bi-annual performance reviews and regular 1-on-1s with each team member, focused on professional growth and constructive feedback.
- My approach to unblocking the team was always to understand what was failing first: in 80% of cases it was lack of clarity on the problem or solution, and in the remaining 20% overestimation or poor planning.
- Eliminated critical technical debt by consolidating dispersed business logic into the core product, reducing complexity and improving maintainability.

- Delivered partial and bi-weekly pay slips coordinating the team from design through to deployment, aligned with business goals in Colombia.
- Ran regular technical sessions with the team, fostering a culture of continuous learning and collective decision review.

Buk – HR Software · junio 2019 – febrero 2021 · Santiago, Chile

Desarrollador de Software

- Introduced and configured parallel_tests to horizontally scale the CI pipeline, significantly reducing integration test execution times.
- Joined as a Ruby on Rails newcomer and contributed to core features of a SaaS product used by thousands of companies across Latin America from my first month.

Tecnosmart SpA · February 2017 – May 2019 · Santiago, Chile

Full Stack Developer

- Lead developer on multiple business management projects for clients like Mallplaza and Lipigas, delivering each one end to end: design, backend, frontend, QA and client handoff.

TECHNICAL SKILLS

Languages: Ruby (main), JavaScript, Python

Frameworks: Ruby on Rails, Node.js, React, Vue.js

Infrastructure: Kubernetes, AWS (familiarity in production environments), CI/CD pipelines

Databases: PostgreSQL, MySQL, Redis

Testing: Minitest (main), RSpec, unit and integration tests

Observability: memory_profiler, stackprof, regression detection and resolution

Methodologies: Agile, Sprints, TDD, Diataxis, DORA metrics

Leadership: Team management, coaching, performance reviews, 1-on-1s, resource planning, hiring, mentoring

Tools: Jira, Looker Studio, Git, Claude Code, Windsurf

EDUCATION

Instituto Universitario Tecnológico Dr. Federico Rivero Palacios

Computer Engineering · 2011 – 2016 · Venezuela

LANGUAGES

Spanish: Native · **English:** Advanced (reading, writing and comprehension)
