TECHNICAL SKILLS

Languages
Ruby (main) · JavaScript · Python

Frameworks
Ruby on Rails · Vue.js · Django

Infrastructure
Kubernetes · AWS · GCP · CI/CD pipelines

Databases
PostgreSQL · MySQL · Redis

ORM / APIs
ActiveRecord · REST · Webhooks

PROFILE

When I face a complex technical problem, my first instinct is to find the pattern: almost no problem is entirely new; only the exact conditions change. It always starts with understanding what is actually happening. When information is missing, a small prototype is more useful than any assumption. The technical plan comes before the code: for an API, I start with the contract; for a bug, I replicate it in a test first. When the analysis is solid, the solution tends to become almost obvious. Writing the code is the last step. After a period as Tech Lead, I chose to return to individual contribution as Staff Engineer; direct technical impact is where I operate best.

WORK EXPERIENCE

Buk – HR Software

Feb 2023 – Jun 2026 · Santiago, Chile

Staff Engineer

- Designed and delivered the Outputs module: the system that generates financial files for ~20,000 companies across Buk's Latin American footprint. Started as an optional feature in Mexico with 1,000 clients; today it is mandatory across Chile, Colombia, Mexico and Peru.
- Designed and delivered the Performance Safety Net: an on-demand tool using `memory_profiler` and `stackprof` to isolate the exact source of performance degradation. Its first real-world use cut a critical payroll background job from 2.5 hours to 15 minutes.
- Led a large-scale data migration, creating approximately 2.4 million records in a controlled way with no impact on production.
- Led the technical design of the team's epics over 3 years as Staff Engineer: from business problem definition through to the technical solution, working closely with the Product Manager on each initiative.
- Mentored engineers across different teams, including one who went on to found the company's AI Guild and ship their own solution with real business impact.

TESTING & PERFORMANCE

Testing

Minitest (main) · RSpec
unit · integration · parallel_tests

Performance

memory_profiler · stackprof
regression detection and resolution

METHODOLOGIES & OTHER

Methodologies

Agile · Sprints · TDD · Diataxis
DORA metrics · technical design · post-mortems

Leadership

Mentoring · technical workshops
code reviews · epics · hiring

AI Tools

Claude Code · Windsurf
structured prompting

Other

Git · parallel_tests · Dentaku
message queues · module architecture

LANGUAGES

Spanish — Native

English — Advanced — EF Certificate

EDUCATION

Inst. Univ. Tec.
Federico Rivero Palacios

Computer Engineering
2011 – 2016 · Venezuela

Buk – HR Software

Feb 2021 – Jan 2023 · Santiago, Chile

Engineering Manager / Tech Lead

- Led the Colombia Payroll team as it grew from 4 to 12 engineers, splitting time between people coordination, PR reviews, career development and delivery tracking.
- Ran regular 1-on-1s and semi-annual reviews based on sprint review data; during the period several engineers moved from Junior to Mid, several from Mid to Senior, and two reached Staff.
- Consolidated dispersed payroll logic into a cohesive module; the refactor gave rise to independent sub-modules that are now core pillars of the product: electronic payroll, calculations and severance.
- Delivered partial and bi-weekly pay slips coordinating the team from design through to deployment; a critical feature for the payroll flow in Colombia.

Buk – HR Software

Jun 2019 – Jan 2021 · Santiago, Chile

Software Developer

- Built the Net Salary Simulator (Rails backend + Vue.js UI): a binary search algorithm to calculate net salary from a given gross, with high numerical precision in a critical financial domain. Now used by HR teams across Latin America to simulate compensation before hiring.
- Introduced `parallel_tests` to horizontally scale the CI pipeline, cutting test suite execution from ~35 to ~5 minutes — a 7× improvement while staying within the existing infrastructure budget.
- Was the first to introduce custom functions into the system's Dentaku expression engine, starting with `periodo_anterior`, opening a new extensibility layer for payroll formulas without modifying the core.

Tecnosmart SpA

Feb 2017 – May 2019 · Santiago, Chile

Full Stack Developer

- Designed and built a real-time traffic visualization system for Mallplaza: full architecture from sensors to 3 display totems at Mall Plaza Los Dominicos; still running today, seen by ~300–400 people daily.
- Led end-to-end development of enterprise management systems for Lipigas with Python/Django: design, backend, QA and client handoff.
