LEADERSHIP

Team Management
Coaching · performance reviews
1-on-1s · resource planning

People Development
Mentoring · technical workshops
hiring · code reviews

Methodologies
Agile · Sprints · TDD · Diataxis
DORA metrics

TECHNICAL SKILLS

Languages
Ruby (main) · JavaScript · Python

Frameworks
Ruby on Rails · Vue.js · Django

PROFILE

My strongest opinion about engineering is that unnecessary complexity is always a liability, never an asset. I default to simple over elegant: not because hard problems don't exist, but because in software we're rarely building nuclear reactors. Running a team works the same way: clarity on what matters, cutting what doesn't, and not adding process layers nobody asked for. The same logic I apply to code, I apply to the team. Simple is not the same as easy; but it's almost always the right direction.

WORK EXPERIENCE

Buk – HR Software

Feb 2023 – Jun 2026 · Santiago, Chile

Staff Engineer

- Led the design and delivery of the Outputs module: the system that generates financial files for ~20,000 companies across Buk's Latin American footprint. Started as an optional feature in Mexico; today it is mandatory across Chile, Colombia, Mexico and Peru.
- Served as the technical design lead for the team's epics and missions over 3 years as Staff Engineer: from business problem definition through to the technical solution, working closely with the Product Manager on each initiative.
- Designed and iteratively improved the team's technical interview process over multiple years; including the practical exercise and evaluation rubric adopted as the standard across the engineering area.
- Mentored engineers across different teams; including one who went on to found the company's AI Guild and ship their own solution with real business impact.
- Designed and facilitated TDD and performance workshops across 4+ teams; several introduced patterns became standard practice in the area. Recurring presenter at Outputs: University, the engineering area's technical knowledge-sharing space.
- Led the Performance Safety Net project: an on-demand tool to identify and isolate bottlenecks when degradation signals appear; its use enabled reducing one critical background job from 2.5 hours to 15 minutes.
- Led a large-scale data migration, creating approximately 2.4 million records in a controlled way with no impact on production.

TECH STACK

Infrastructure
Kubernetes · AWS · CI/CD pipelines

Databases
PostgreSQL · MySQL · Redis

Testing
Minitest (main) · RSpec
unit · integration

Observability
memory_profiler · stackprof
regression detection

Tools
Jira · Looker Studio · Git
Claude Code · Windsurf

LANGUAGES

Spanish — Native

English — Advanced — EF Certificate

EDUCATION

Inst. Univ. Tec.
Federico Rivero Palacios

Computer Engineering
2011 – 2016 · Venezuela

Buk – HR Software

Feb 2021 – Jan 2023 · Santiago, Chile

Engineering Manager / Tech Lead

- Led a team that grew from 4 to 12 engineers, splitting time between people coordination, PR reviews, career development and technical plan tracking.
- Reduced the team's cycle time from ~14 days to 5–7 days; tracked continuously via DORA metrics throughout the period.
- Ran regular 1-on-1s and semi-annual reviews based on sprint review data; during the period several engineers moved from Junior to Mid, several from Mid to Senior, and two reached Staff.
- My approach to unblocking the team was always to understand what was failing first: in 80% of cases it was lack of clarity on the problem or solution; in the remaining 20%, overestimation or poor planning; based on data collected from sprint reviews and 1-on-1 summaries.
- Rebuilt the onboarding process from scratch: replaced an unstructured system with internal training courses, an assigned buddy program and process documentation; enabling new engineers to contribute to production from their first weeks.
- Consolidated dispersed payroll logic into a cohesive module; the refactor gave rise to independent sub-modules that are now core pillars of the product: electronic payroll, calculations and severance.
- Delivered partial and bi-weekly pay slips coordinating the team from design through to deployment, aligned with business goals in Colombia.

Buk – HR Software

Jun 2019 – Jan 2021 · Santiago, Chile

Software Developer

- Built the Net Salary Simulator (Rails backend + Vue.js UI): a binary search algorithm to calculate net salary from a given gross, with high numerical precision in a critical financial domain. Now used by HR teams across Latin America to simulate compensation before hiring.
- Introduced `parallel_tests` to horizontally scale the CI pipeline, cutting test suite execution from ~35 to ~5 minutes — a 7× improvement; within the existing infrastructure budget.

Tecnosmart SpA

Feb 2017 – May 2019 · Santiago, Chile

Full Stack Developer

- Designed and built a real-time traffic visualization system for Mallplaza: full architecture from sensors to 3 display totems at Mall Plaza Los Dominicos; still running today, seen by ~300–400 people daily.
- Led end-to-end development of enterprise management systems for Lipigas with Python/Django: design, backend, QA and client handoff.
